## Search Notes

Attached are: a copy of your search request for your files (I emailed the search results to you a little earlier today) and a search feedback form (completing this is voluntary). EIC 3700 welcomes your feedback and would be particularly interested in knowing if you use any of these references in an office action. If you have a moment, please let us know which references you use.

I hope the results are useful. Please feel free to contact me if you have any questions or want additional searching on this application.

A handwritten signature in dark ink, appearing to be "JH", is located in the lower right area of the search notes section.

Priority Applications (no., kind, date): JP 2006173553 A 20060623

Alerting Abstract ...NOVELTY - The game machine has a main control unit that performs mechanical random lottery to determine the frequency of the occurrence of a winning state and a jackpot situation based on the operation of the distribution portion (172) of the first variable prize dispensing apparatus (17), and performs random lottery for opening the first variable prize dispensing apparatus in a jackpot situation. The first variable prize dispensing apparatus is arranged with other variable prize dispensing apparatuses

(18-20) on the game board (1) of the game machine. DESCRIPTION - A game ball is won when the first variable prize dispensing is opened after performing random lottery, and is led-out through the disk hole (17c) provided in the distribution portion. The game balls roll into the hole (174) formed at a specific area on the game board towards the first variable prize-dispensing apparatus which is interlocked to sequentially open the other variable prize dispensing apparatuses. INDEPENDENT CLAIMS are also included for the following... 18-20 Other variable prize dispensing apparatuses...

Roulette gaming machine for playing lottery, has lottery area having set of pockets, and ball accommodated in numbered and colored pocket, where ball is launched and transferred to one lottery area to hold lottery

Patent Assignee: ARUZE CORP (ARUZ-N); ARUZE KK (ARUZ-N)

Inventor: YOSHIZAWA K

Patent Family ( 2 patents, 2 & countries )

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
US 20070265056	A1	20071115	US 2007798422	A	20070514	200782	B
JP 2007301301	A	20071122	JP 2006135582	A	20060515	200782	E

Priority Applications (no., kind, date): JP 2006135582 A 20060515

Alerting Abstract ...NOVELTY - The machine (1) has a lottery area having a set of pockets corresponding to marks. Another lottery area comprises a set of special pockets. A ball rolls on the former lottery area to be accommodated in one of the pockets. The ball is temporarily accommodated in a numbered and colored pocket, where the ball is launched and transferred to latter lottery area to hold the lottery. A bet acceptance unit accepts a betting operation. A special privilege providing unit provides a special privilege to the player according to special pockets in which the ball launched by a ball launching unit. DESCRIPTION - An INDEPENDENT CLAIM is also included for a playing method of a roulette gaming machine... USE - Used for playing a lottery. ... ADVANTAGE - The ball temporarily accommodated in the numbered and colored pocket is launched and transferred to one area to hold the lottery, thus visually giving a great sense of success to the player in transition to the lottery in the lottery area, and hence enhancing the sense of expectation of the player for the lottery result... DESCRIPTION OF DRAWINGS - The drawing shows a perspective view of an outer appearance of a roulette gaming machine... 1 Roulette gaming machine... 2 Roulette device

Original Abstracts: A roulette gaming machine is provided with a first lottery area having a plurality of pockets, a second lottery area provided independently from the first lottery area, a ball which rolls on the first lottery area, and which is accommodated in one of the plurality of pockets, a ball launching unit configured to launch the ball accommodated in the pocket when a predetermined condition is satisfied. In a case where the number on which a player bets, for example, 20 credits or more at each station wins in a base game using the first lottery area, the ball is launched up in a predetermined direction by the ball launching unit, and transferred from the first lottery area to the second lottery area. Then, a bonus game using the second lottery area is started.

Claims: What is claimed is: 1. A roulette gaming machine, comprising: a first lottery area having a plurality of pockets respectively corresponding to marks; a second lottery area provided independently from the first lottery area, the second lottery area having a plurality of special pockets; a ball which rolls on the first lottery area to be accommodated in any one of the plurality of pockets; a bet acceptance unit configured to accept a betting operation that a player makes by using accumulated game media, according to anticipation of the mark corresponding to one of the plurality of pockets in which the ball is to be accommodated; a winning number detection unit configured to detect, as a winning number, the mark corresponding to one of the plurality of pockets in which the ball is accommodated; a privilege providing unit configured to provide a privilege to the player according to the betting operation and the winning number; a ball launching unit configured to launch the ball accommodated in the pocket in a case where a predetermined condition is satisfied; and a special privilege providing unit configured to provide a special privilege to the player according to one of the plurality of special pockets in which the ball launched by the ball launching unit is accommodated.

NOVELTY - A game board is comprised in the front side of pinball machine. The first starting hole, second starting hole, passage gate, attacker and out opening are provided in the game board. The presentation image display device with which a presentation image is displayed, is provided in the substantially-central portion of game board. A persistence-rate lottery unit is provided in main control unit to perform continuation probability lottery, which determines the probability lottery table used by table selection lottery, when passage of pachinko ball is detected and won in first starting hole.

GAME MACHINE, PROGRAM, AND STORAGE MEDIUM

Pub. No.: 2004-105546 [JP 2004105546 A ]

Published: April 08, 2004 (20040408)

Inventor: IMAZEKI SUSUMU

SAKURAI TAKAHIRO

Applicant: OLYMPIA KK

Application No.: 2002-273909 [JP 2002273909]

Filed: September 19, 2002 (20020919)

#### ABSTRACT

PROBLEM TO BE SOLVED: To give a sense of expectancy of "a big win" to a player, in accordance with a game operation performed by him/her, by reflecting his/her skill on a transition lottery.

SOLUTION: A first passage gate 16 and a second passage gate 17 are provided in a game area 4a which is formed on the surface of a game board. A table of random numbers, which is to be used at the transition lottery performed by the entry of a game ball into a starting winning port 12, is switched when the game ball passes through either the passage gate 16 or the passage gate 17 within a predetermined time after passing through another passage gate 16 or 17. The distribution of the random number values of the table of the random numbers, which is selected at the passage of the game ball through the passage gate 16 or 17, is greater than that of the random number values thereof in the unpassage of the game ball through the passage gate 16 or 17. This encourages the player to shoot the game ball at the passage gate 16 or 17.

Alerting Abstract ...bets and a wheel (106) with many slots corresponding to a face of at least one die. The wheel can retain and direct a rolled ball such that comes to rest in one of the slots. The wheel is independent of the game surface. The mini roulette game that is provided makes use of the wheel DESCRIPTION - INDEPENDENT CLAIMS are included for a wheel for determining a winner of a bet and a roulette game... ...USE - For gambling ... ...ADVANTAGE - The combination game minimizes the required amount of casino floor space needed...

Original Abstracts: An electronic combination craps and roulette game including a display for displaying a game surface having bet indicia thereon for displaying bets for both craps and roulette, wherein the craps bets comprise two or more of pass bets; don't pass bets; hardways bets; any craps bets; 2 craps, 3 craps, and 12 craps bets; 7 and 11 bets, win bets, buy bets, and lay bets and wherein the roulette bets comprise a numeral corresponding to a face of at least one die. Preferably, the display further displays a wheel having a plurality of slots, each of the plurality...

Claims: What is claimed is: 1. A combination craps and roulette game comprising a game surface, the game surface having indicia thereon for displaying bets for both craps and roulette, wherein the craps bets comprise two or more of pass bets; don't pass bets; hardways bets; any craps bets; 2 craps, 3 craps, and 12 craps bets; 7 and 11 bets, win bets, buy bets, and lay bets, and wherein the roulette bets comprise at least one of a numeral corresponding to the face of the at least one die and a color corresponding to the face of the at least one die... ... What is claimed is: 18. An electronic combination craps and roulette game comprising a display for displaying a game surface having bet indicia thereon for displaying bets for both craps and roulette, wherein the craps bets comprise two or more of pass bets; don't pass bets; hardways bets; any craps bets; 2 craps, 3 craps, and 12 craps bets; 7 and 11 bets, win bets, buy bets, and lay bets and wherein the roulette bets comprise a numeral corresponding to a face of at least one die, said display further comprises a wheel having die indicia corresponding to each face of at least one die, the wheel also having means for selecting one of the die indicia.

Alerting Abstract ...NOVELTY - The roulette assembly (40) comprises two independently rotatable indicia wheels (52,58) rotatable about a common axis, each wheel having numbers or colors. The two wheels are engaged in alignment with each other after independent spinning. A ball indicator randomly selects a position on the periphery of the outer wheel (52) and selects a unique color/number combination. DESCRIPTION - The roulette wheel system comprises a first roulette assembly with a base, a lower wheel and an upper wheel. The lower wheel has a circular base, inner and outer annular lips coupled to... ...wheel has solenoids of different colors mounted on the upper and extending from the center of the upper wheel, each including a transducer with a ball mounted on an end for random and removable insertion within one of the apertures of the compartments. The system further comprises a second roulette assembly, comprising a base, a lower wheel and an upper wheel. The base has a recess formed in the bottom with a disk-shaped lower portion and an inverted frustoconical upper portion, with a peripheral lip with a C-shaped cross section. The base further has a spring biased manual ball injector. The lower wheel is mounted within the disk-shaped lower portion of the recess, and has vertically oriented lines defining equally spaced sections each... ...USE - Casino wheel game system for rendering various number and color combinations in a unique manner...

Original Abstracts: A roulette assembly (40) includes two independently rotatable indicia wheels (52, 58) rotatable about a common axis, each wheel bearing either a plurality of numbers or a plurality of colours. Means (56, 60) are provided for engaging the two wheels in alignment with each other after they have been spun independently of each other. A ball indicator randomly selects a position on the periphery of the outer wheel (52) and thereby selects a unique colour/number combination... ... A roulette assembly is provided including a lower wheel divided into a plurality of sections each representative of at least one of a unique number and a unique color. Also included is...

Claims: A roulette wheel system comprising: a first roulette assembly including: a base fixedly mounted on a recipient surface and including a circular bottom with a peripheral lip integrally coupled to a periphery of the circular bottom and... ... a different color; and means for randomly actuating one of the solenoids of the upper wheel to extend the transducer structure of the solenoid; a second roulette assembly including: a base fixedly mounted on a recipient surface and including a circular bottom, a recess formed in the bottom with a disk-shaped lower portion and an inverted frusto-conical upper portion, and a peripheral...

Abstract: Double roulette wheels genetic algorithm was proposed to deal with the inequality constraints directly . Different fitness function was built for the feasible and infeasible individual in the population, respectively. The fitness function of the feasible individual reflected the objective function value; the fitness function of the infeasible individual reflected the degree of which the constraints were satisfied. Double roulette wheels was employed to select them respectively. A formula to decide the rotation times of each roulette wheel was given to make the feasible individual has greater probability to be selected than the infeasible ones. During the evolution, the individuals could move to the feasible region automatically. Then the inequality constraints were dealt with in a directive way and all infeasible initial population could be allowed. In addition, an improved real-coding copulation operator was also raised. This operator has more detecting ability than the classical two points inner interpolative operator. Examples show that the algorithm is not only an easy way to give global solution but also a simple and high effective method to deal with the inequality constraints. ( 4 Refs)    Subfile: B C

Treatment: Theoretical (T)

Abstract: According to the viewpoint that mapping function of the neural network from input to output is in fact a generalized series expansion, a new crossover strategy that takes dual roulette wheel selection to choose the crossover segment according to its function is proposed. It can avoid segments with similar functions appearing in the same off-spring, and then the occurrence of the "competing conventions problem" in genetic optimizing neural networks is prevented. Simulation on a two-class classification problem shows that such strategy is very efficient, and the network being evolved is well convergent until the best global optimum solution is found. Abstract:

A gambling game includes a housing; a first wheel of a first diameter rotatably mounted in the housing and having an exposed surface with a first plurality of numbers on a circumferential area thereof and a plurality of colors, each associated with one number; a second wheel of a second diameter smaller than the first diameter and rotatably mounted in the housing and within the first wheel, the second wheel having an exposed surface with a second plurality of numbers on a circumferential area thereof and a plurality of colors, each associated with one number; first and second flexible pointers for indicating one number and one color on the first wheel and one number and one color on the second wheel after rotation of the first and second wheels; and a single wagering area for both wheels, including boxed areas for wagering on individual numbers from the first and second wheels which are indicated by the indicating arrangement; at least one numerical outcome from an arithmetic operation of multiplication, addition or subtraction performed between the two numbers from the first and second wheels which are indicated by the indicating arrangement; and individual colors and color combinations which are indicated by the indicating arrangement.

Journal Announcement: 200311

Subfile: MR (Mathematical Reviews) AMS

Abstract Length: LONG (33 lines)

In this paper the author develops an infinite horizon model of preference for flexibility in the spirit of the well-known earlier work of Koopmans and Kreps. While the model in Kreps is a two-period model of preference for flexibility the objective in this paper is to formulate the model in a manner which emphasizes and makes explicit the infinite horizon nature of the problem. There is a finite set  $X$  of choices available in each period. Let  $Z$  be the power set of  $X$  and  $Y$  the infinite product of  $X$  consisting of all paths. Let  $V$  be the set of all closed sets of paths. An element  $v$  of  $V$  is a set of paths. The preference ordering is defined on the set of all lotteries over  $V$ , that is, the set of all simple probability measures  $s(V)$  on the set  $V$ . Intuitively, one may think of an element  $v$  in  $V$  as a set of possible choices available in the first period, and for each one of these choices a corresponding set of paths available after this choice has been made. The preference relation  $\succ$  on  $V$  is assumed to be a strict weak order that is von Neumann Morgenstern continuous and such that the independence assumption is satisfied. It is proved that the strict weak order  $\succ$  on  $V$  satisfies the assumptions of von Neumann Morgenstern continuity, independence, strong continuity and monotonicity if and only if there is a utility function  $U$  on  $V$  such that for any simple lottery  $\alpha$  on  $V$  one has  $U(\alpha) = \sum_{v \in V} \alpha(v)U(v)$  and the function  $U$  is continuous and monotonic. In order to prove the main result of the paper, which involves several technical considerations, the author introduces a strong form of the monotonicity assumption involving the concept of stochastic dominance. In the main theorem of the paper the author shows that if the stochastic dominance assumption is added to the assumptions given above then one gets a complete characterization of additive representations.

Abstract Length: MEDIUM (11 lines)

From the text: ``Our games, unlike those that have found application in economics, management, and military strategy, are completely determined. There is complete

information: the players know exactly what is going on; there is no bluffing. There are no chance moves: no dealing of cards; no rolling of dice. We have only two players, Left and Right: there can be no question of coalitions.

``For each given position in a game, the rules define two sets of options, available respectively to Left and to Right, leading to other positions. Left and Right alternately choose an option, i.e., play to a position, specified by the rules.''

Pennsylvania Lottery million dollar spin wheel, Lottery's "new look" unveiled. (NEWS ADVISORY)

PR Newswire , 0423PH004

April 23 , 1990

Text:

-- NEWS ADVISORY -- TO STATE, ASSIGNMENT AND PHOTO DESKS:

PENNSYLVANIA LOTTERY MILLION DOLLAR SPIN WHEEL,  
LOTTERY'S "NEW LOOK" UNVEILED

Pennsylvania Lottery officials will unveil the new Saturday Million Dollar Spin Wheel and the "new look" of the Lottery's nightly drawing show to the media on Friday, April 27.

Those interested should meet at 1:30 p.m. at the WHP-TV studio, 3300 N. Sixth Street in Harrisburg, Pa., site of the Lottery's drawing show.

The wheel was designed in conjunction with the format for the Lottery's new Saturday night Million Dollar Spin, which starts May 5. The wheel, unique to the Lottery industry, is actually two wheels in one -- a wheel within a wheel. The outer wheel will contain the names of the 10 finalists and will determine the winner; the inner wheel will determine the cash prize the winner will receive.

In addition to inspecting the new wheel, interested media may watch rehearsals of the Lottery's daily drawing show, which will be changing it's "look" on Monday, April 30, with a new set design.

...Hence, Foxwoods in Connecticut offers two or three single-zero games in its Club Newport International room, according to Long.

Despite the significantly worse odds, casino managers say, there has been no outcry from everyday roulette players to eliminate the double-zero wheels in favor of the singles. "It's a lack of knowledge that drives the game," Bingham said candidly. "The general population--we have to kid...

..is much more better-friendly than the American wheel.

So, Fred, two thoughts here: Look for the surrender option when playing

even money wagers in roulette; and, given the choice between the

two wheels, always play the European single zero wheel. Make

it three thoughts: The correct question is NOT what is the perfect bet, but  
the perfect move...

A NEW GAME IS COMING TO TOWN: 'JACKPOT BINGO'

Phoenix Gazette ( PG ) - WEDNESDAY May 28, 1986

By: Barbara , Holsopple

Edition: Final Section: Tempo Page: C7

Word Count: 974

Memo:

Radio/TV

Text:

Two new local shows hit the air in June, as Channel 3 debuts a bingo game and Channel 45 premieres a teen dance party.

"Jackpot Bingo" will air weekdays from 4:30 to 5 p.m., starting June 9.

"The Lloyd Thaxton Show" will run in the same time slot, starting June 30.

"Jackpot Bingo" is a KTVK adaptation of a syndicated craze that is sweeping the country. The show is billed as the only TV game show allowing viewers to win money without leaving their living room couches. The "blackout bingo" winnings range from \$25,000 to \$25, with a gimmick that could possibly double the winnings.

Channel 3 weathercaster Jim Howl and local actress Ana Auther will co-host "Jackpot Bingo," using the cards, title and set design supplied by the syndicator.

Bingo cards will be distributed, starting June 6, via the show's sponsors, which at this time include Arby's, Basha's Markets, Tele-Sound and Tele-Vid.

"Jackpot Bingo" replaces "The People's Court," which moves to Channel 12 in the fall. Channel 3's "Court" contract ends in September, but it's common and prudent practice to drop a moving show in the hopes that viewers will switch their loyalties before it reappears.

Channel 3 program director Sue Schwartz says she bought "Jackpot Bingo" for a summer run.

"We have no plans to carry it into the fall," she said. "It's something fun to do for the summer, and it's something the whole family can do together. We think it will be popular, because there are 675 licensed bingo outlets in the state of Arizona, the majority in Phoenix and Tucson. Obviously, if it's a tremendous hit we'll find a place for it."

Given the show's history, if Schwartz has failed to tie up "Bingo" through fall she's playing with a blank card.

The show has been credited with boosting news ratings in places as diverse as Hawaii, Oklahoma City and Pittsburgh. In Pittsburgh, it airs on a station that shares KTVK's ratings profile -- its newscasts run 10th in a three-station race -- and the bingo game has boosted its news lead-in audience so well that the station actually declined to pre-empt it for President Reagan's press conference announcing the Libya bombing in April.

One would hope, of course, that Channel 3's news judgement would take

precedence over such greed. Meanwhile, as Howl and Auther are yelling out bingo numbers, the family teenagers may be dancing in Channel 45's studio to the platters and prattle of Lloyd Thaxton..
